Overview

Dr. Joachim Venus, Senior Scientist “Industrial Biotechnology”, is program coordinator for the research program “Material and energetic use of biomass” and head of the research group bio-based products at the Leibniz Institute for Agricultural Engineering and Bioeconomy (ATB Potsdam).

His work emphasized on the development of continuous processes for the production of basic chemicals - in particular lactic acid - from biomass. At ATB Joachim Venus is in charge of numerous national and international research projects being carried out in the multi-functional pilot plant for the biotechnological production of lactic acid from plant biomass. The scale-up to a technical scale of several processing steps have to be developed for transferable solutions of bioconversion technologies based on renewable materials. For that purpose a multifunctional pilot plant was built at the site of ATB to investigate different feedstocks and bio-based products.

He has published a great deal of papers in well-known journals of those research fields. Moreover, he has taken part in more than 100 presentations and proceedings, since 2003, such as in “World Congress on Industrial Biotechnology and Bioprocessing”, “International Conference on Environmental, Industrial and Applied Microbiology/BioMicroWorld”, “European Biomass Conference and Exhibition”, “European Forum for Industrial Biotechnology/EFIB”, “International Conference on Renewable Resources and Biorefineries/RRB” or “Symposium on Biotechnology for Fuels and Chemicals”.

He is heading the national advisory board "Biotechnology of Renewable Resources" at DECHEMA. On international level Joachim Venus is being also a Management Committee member for Germany in the COST Action TD 1203 (Food waste valorisation for sustainable chemicals, materials & fuels, EUBis).

Main Research Fields

- Industrial Biotechnology, Biorefineries, Scaling-up of Bioprocesses
- pre-treatment of biomass for microbial conversion processes, bioconversion of renewable resources
- kinetics of cell growth/product formation and modelling of fermentation processes
- development of continuous mode processes for the production of basic chemicals (e.g. lactic acid) and biomass
- operation of a pilot plant facility for the optimization of biotechnological processes

Professional development

- **Group Leader Bioconversion** at ATB Potsdam (since April 2003) and **Program Coordinator** of the research program "Material and energetic use of biomass" at ATB Potsdam (since 2014)
- **Research associate/assistant** at the Brandenburg University of Technology (01/1997 – 04/2003)
- **Research associate** at University of Potsdam (01/1992 – 12/1996)
- **Research associate** at Institute of Biotechnology Potsdam (09/ 1988 – 12/ 1991)

Education

- **PhD** at TU Dresden (09/1984 – 08/1988, "Scale-up of aerobic fermentation processes in the pharmaceutical industry")
- **Dipl.-Ing. in Biotechnology** at Anhalt University of Applied Sciences Köthen (09/1980 – 08/1984)

Teaching (since 1992)

Microbiology, Bioengineering, Bioreaction engineering, Environmental Biotechnology, Renewables & Bio-conversion Processes

(University Potsdam, Technical University Dresden, Brandenburg University of Technology Cottbus-Senftenberg/BTU, Leibniz University Hannover, University of Applied Sciences Zittau/Görlitz, Lausitz University of Applied Sciences Senftenberg, University of Applied Sciences: Technology, Business and Design Wismar, Furtwangen University of Applied Sciences, UNICAMP Campinas/Brazil, Masdar Institute Abu Dhabi/UAE)

III Expertise & recent projects:

The institute’s task is to create process-engineering bases for sustainable land-use management and to provide innovative technical solutions for agriculture and industry. The mission of ATB is application-oriented basic research in all areas of agricultural engineering. By combining scientific and engineering findings with economic and social expertise it is ensured that the newly developed processes and technical solutions are profitable for manufacturers and users but also meet the concerns of consumer-, animal-, and environmental protection and of sustainability.

Production, conditioning, and biotechnical conversion of renewable raw materials for generating bioenergy and bio-based materials are focal research issues at the institute since its foundation in 1992. With its complex research program the ATB has developed comprehensive expertise in the field of biomass research. Its work makes a considerable scientific-technical contribution to the reorientation process in energy and material producing industry towards the utilization of bio-based feedstocks. It also provides knowledge and technologies for a successful and internationally leading ‘knowledge based bio-economy’ (KBBE).

<http://www.atb-potsdam.de/en/institute/about-us/research-infrastructure/pilot-plant-lactic-acid.html>

For several years, “**bioconversion of raw materials produced in agriculture into chemicals, microbial biomass and active substances**” has been the subject of intensive studies in the bioengineering department of the ATB. Alongside technologically oriented studies of the overall process (pre-treatment of renewa-

bles/residues, fermentation, up- und down-stream) design, they include fundamental research into strain optimization and the kinetics of microbial processes.

BREAD4PLA: Demonstration-plant project to produce poly-lactic acid (PLA) biopolymer from waste products of bakery industry	EU: EU LIFE10 ENV/ES/479	2011-2014	http://www.bread4plalife.eu/index.php
Sugarcane biorefinery: bioconversion of bagasse into lactic acid and poly-lactate	international: FKZ 01DN12053, BMBF (Brazil/Germany)	2012-2014	
Food waste valorisation for sustainable chemicals, materials & fuels (EUBis,) – MC Member	EU: COST-Action TD1203	2012-2016	http://costeubis.org/
Residues from the coffee production as potential feedstock for the biotechnological production of bulk chemicals / CAFELACTIC	international: FKZ 01DN13057, BMBF/DLR (Colombia/Germany)	2014	
Assessment of the potential of maniok (<i>Manihot esculenta C.</i>) and chinese potato (<i>Colocasia esculenta L.</i>) for the lactic acid fermentation / CACHIPLA	international: FKZ 01DN13056, BMBF/DLR (Colombia/Germany)	2014-2015	
Commercial production of lactic acid (L & D) from non food lignocellulosic feedstock in a resource efficient biorefinery process	EU: CIP-EIP-Eco-Innovation (CELLULAC – ECO/11/304523)	2012-2015	http://cellulac.co.uk/en/
Bio-Nylon-Nachhaltige Produktion von Bio-Adipinsäure als Plattform-Chemikalie	national: FKZ 03V0757, BMBF/ VIP initiative,	2014-2017	
Prozessoptimierung und Untersuchungen zur stofflichen Verwertung von Prozessabfällen in der Molkeindustrie / LACTO-plus	international: Österreichische Forschungsförderungsgesellschaft mbH (FFG) – Projektnr. 848572	2016-2017	
Branlact - Thermophile Milchsäureproduktion in kontinuierlicher Kultivierung auf Basis von Reiskleie	international: FKZ 031B0174, Bioökonomie International 2015, BMBF/DLR,	2016-2019	
Contract research / bilateral assignments (among others Uhde Inventa-Fischer Berlin; UIT GmbH Dresden; Pfeifer & Langen KG Elsdorf; Uhde BT Leuna; Endress+Hauser Conducta Gerlingen; NordBioChem Tallinn; Sustainable Biopolymers Ltd.& NUI Galway; HF Biotec Berlin GmbH; American Science and Technology Chicago; Fresh Factory GmbH & Co. KG Hamburg; Stenger Waffelfabrik GmbH; Cenicafe-FNC Colombia; DIREVO Industrial Biotechnology GmbH; Hermetia Baruth GmbH; AIMPLAS - Instituto Tecnológico del Plástico)
